MAREX 310 SUN CRUISER

Marex 310 Sun Cruiser is an elegant and innovative 31-foot boat fashioned on current trends and customer needs. The 310 Sun Cruiser mixes a classic hull style with a sports spirit, rounded bow and smooth profile lines. Being the smallest in the Marex range, it is the perfect Cabin Cruiser for four guests, designed to deliver the ideal combination of comfort and space for families and friends.

The concept

Marex is a family shipyard, so the customers' wishes are revered here. Already in its 5th generation, the famous 310 line embodies the cruiser concept in the best possible way. The Marex 310 Sun Cruiser has won many awards, including Motorboat of the Year, European Powerboat of the Year and the German Design Award for its design, functionality and safety. Judges were impressed by Marex's clever storage systems, where each centimetre has a practical purpose.

Swim platform

The first stylish solutions to be experienced by guests are the practical swim platform benches. These are set to become your favourite place to relax on sunny days. Storage lockers beneath them can also be used to keep fishing, scuba gear, mooring equipment, etc.

Cockpit

Measuring in at a compact 9,46 metres in length, the 310 Sun Cruiser features a spacious cockpit/salon area. The extensive wrap-around seating is organised around a large folding table, in the centre of which are handy drink holders. With a forward-facing co-pilot sofa, the 310 is an enormously enjoyable way of cruising with up to 10 guests. Also, it's possible to lower the dining table and easily convert the benches to create a perfect sunbed for a sunny day or a sleeping berth for extra guests. Another sunpad can be found on the foredeck. The expansive side decks with high rails lead safely to it.

Smart canopy solution

The cockpit canopy solution is the most exciting and innovative detail distinguishing the 310 Sun Cruiser from similar pleasure boats. It is the world's fastest system, which allows the side curtain to be closed quickly by pulling it out from the side vertical compartment. This will enable guests to quickly open the cockpit to the sun or close it in a sudden rain while

prolonging the boating season. In addition, two sliding sunroofs over the cockpit can be opened or fixed in several positions, providing the necessary level of shading/sun.

The galley

An innovative galley on the lower deck is equipped with a sink, oven, gas hob and many storage systems, while the 130-litre fridge and freezer are hidden under the co-pilot seat. Solar roof panels make it possible to use them for long periods, far away from shore power.

The boat has a uniquely sliding door with a retractable section that connects the galley to the cockpit in a social and complimentary way. It lets the chef cook while connecting with the rest of the guests in the cockpit. Moreover, this layout lets in plenty of light and good ventilation to the lower deck, and the locking door can be used as additional safety protection during the night.

Accommodation

There are two cabins on the lower deck with spacious double beds up to 1,60 m wide and wardrobes. Large hull windows provide natural light and the feeling of space. Thanks to a large, well-finished bathroom, all guests will have high on-board comfort.

Propulsion and helm

The boat has a planning hull and is equipped with a single sterndrive. A Volvo Penta D4 300 HP diesel engine, ideal for calm waters and rough sea conditions, powers the standard version of the 310 Sun Cruiser. Marex also offers more powerful engine options, such as the D6-370 EVC or alternatives from Mercury with additional smart electronics.

The 310 Sun Cruiser features an ergonomic panel equipped with a large chartplotter. Here, the captain's seat can be adjusted depending on the need to drive standing or sitting.

About Marex

Marex Boats was founded in 1973 in the south of Norway. It is a family shipyard with a mission to create high-quality family cabin cruisers with fantastic comfort and safety. Marex Boats has a 28,000 m² production facility in Kaunas, Lithuania, employing more than 400 professionals. The present range consists of six cruisers from 9.5 to 14 metres in length.

The philosophy of Marex Boats is to have total control at every stage in the process, including the sea trial of every single hull. Every model combines excellent quality, practicality and craftsmanship with the latest technology. That's why Marex Boats is a multiple winner of the European Motorboat of the Year, European Powerboat of the Year, German Design Award, BOB Awards, and many others.
